Jeff and I started in 2014 timeframe when we saw they were using 96 mrem table for ewmwf
And I was working with Jennifer on same issue with Paducah the same year, they were trying to use NRC's 50 mrem # in a table for ESD

Subject: FW: Question re ORR History

Do you know the year when EPA and DOE first tried to reach agreement on rad discharge limits on the old and/or proposed landfills?

Subject: RE: Question re ORR History

I believe it would go back to when the Region and DOE were trying to reach agreement on waste discharge limits for the old landfill and then pushed it off until EMDF.

Does this go back to the proposal for the first landfill or are you just talking about the proposal of the new landfill?

Subject: Question re ORR History

Hi Randall and Glenn,

I need to fill in the blanks for one of Larry's comments – how long has DOE been developing these options?

“For [XXXX] years, DOE has been developing options for the disposal of contaminated building debris and soil (including mercury and radioactive wastes) utilizing a new and existing landfill to receive ORR wastes, and the discharge of landfill wastewater into a nearby creek.”

Thanks,

Chelsea
